APNOMART — KEY BUSINESS INSIGHTS

The Insight Board | Prepared by Kumbham Varsha | October 2026

Dashboard summary

After looking at the ApnoMart sales data, I found that the business made **INR 16.26 million in sales** and **INR 4.42 million in profit** from **1,200 orders**. The average sales value is **INR 13.55K**, and the overall profit margin is **27.18%**.

1. Sales performance

Furniture has the highest sales among the categories, at around **INR 35.18 lakh**. When I compared the regions, East came first with sales of about **INR 34.37 lakh**. The monthly trend also shows that July had the highest sales, at approximately **INR 29.58 lakh**.

This suggests that Furniture and the East region are important areas for the business. It would be useful to look at what helped sales increase in July and see whether similar activities could work in other months.

2. Profit by category

Office Supplies is the most profitable category in the data. It made around **INR 11.77 lakh** in profit and has a profit margin of **34.81%**. Electronics has the lowest category margin at **18.88%**, with profit of about **INR 5.58 lakh**.

I think the business should continue to support Office Supplies because it is performing well. For Electronics, the company could check whether product costs, selling prices, or discounts are affecting the profit margin.

3. Customer and payment observations

Corporate customers bring in the highest sales among the customer segments, with approximately **INR 43.11 lakh**, which is about **26.5%** of total sales. Cash is the most-used payment method, with **258 orders** or around **21.5%** of all orders.

This shows that Corporate customers are an important customer group. The business should try to maintain these customer relationships and continue to offer payment methods that customers find convenient.

My recommendation

Based on these findings, I recommend focusing on keeping Corporate customers and building on the good performance of Office Supplies. I would also review the pricing, costs, and discounts for Electronics to understand its lower margin. The business can study the East region and July sales results more closely before deciding where to spend more on promotions.

Note: The figures are rounded. The dashboard shows sales from May to October 2026, and October may be an incomplete month. These are observations from the available data; the data alone does not explain why the results occurred.
